The Importance of Proper Brazing. Brazing is ideally suited for joining of dissimilar metals and is performed at relatively low temperature. We've said that a brazed joint "makes itself"—or that capillary action, more than operator skill, insures the distribution of the filler metal into the joint.

Microfabrication is the process of fabricating miniature structures of micrometre scales and smaller. Historically, the earliest microfabrication processes were used for integrated circuit fabrication, also known as "semiconductor manufacturing" or "semiconductor device fabrication".

An alternator is an electromechanical device that converts mechanical energy into electrical energy. An alternator is so named because it produces alternating electrical current. This energy can be converted from one voltage to another using a transformer. Thus, the 12-volt AC output from an alternator can be ...
